

Reported fly tipping for Q4 2024 January February March, side waste/ bin bags excluded to give an accurate picture and type of waste tipped in central ward. I have also printed off the fly tipping hot spots by street and ward. I have done the same with the side waste/bin bags hotspots and amounts. Total amount of side waste for Q4 is 98 black bin bags presented at collection points on bin day but not removed by operators. I have not been able to drill down which was recycling, these are plastic bottles which should be in clear bags not black. In relation to cardboard, which is also classed as side waste, I can report that operators will not put large cardboard boxes like tv boxes in the compactors, neither will they take household black bin bags left out as overspill which is classed as side waste and not fly tipping. The long-term plan is to identify which property is missing their bins, this includes removal of contaminated bins which I report to neighbourhood services monthly on a spread sheet, with photos of the bins and exact location. The hot spots for Side waste gives me an advantage in doing so.
